

NOTES ON EDUCATION.

Syracuse University now has 250 students in actual attendance.

It is proposed that a technical course be introduced in the Cleveland High schools.

Williams College has 284 students, seventeen of whom take a partial course. The college has graduated altogether 2,370 students.

Columbus is said to have \$150,000 in the college treasury, but it has refused to buy Mr. Strong's valuable library at the price of \$15,000.

The total of school receipts in Ohio for the past year was \$427,000. The payments amounted to \$20,523. Male teachers receive an average salary of \$61 per month; female teachers, \$34.

The botany class in the public school of Woodbury, N. J., presents a good example to other country schools. During the past season it has analyzed and traced 250 plants, some of these being very rare.

The New-Hampshire Agricultural College, in spite of the aid given it by Dartmouth and the unpaid services of many of Dartmouth's best professors, is said to be a failure. With facilities for a hundred students it has only about half-a-dozen, and it has incurred a debt of \$6,000.

The school moneys of New-Jersey are reported as amounting to \$2,050,000. The school property is valued at \$6,15,000. The school numbers 313,378; the number enrolled is 198,709, and the average attendance 72,197. The private schools have about 42,200 pupils. There are 954 male teachers and 2,356 female teachers. The former receive average salaries of \$63.78 per month; the latter \$37.04. The cost of education per capita is \$14.61 per annum.

The following is a list of the number of graduates from various Colleges, in the class of '77: Yale, 170; Harvard, 168; Princeton, 112; Amherst, 75; Lafayette, 66; Dartmouth, 65; Brown, 55; Columbia, 52; Williams, 40; Bowdoin, 39; Wesleyan, 31; University of Pennsylvania, 31; Rutgers, 20; University of California, 24; New York University, 25; Pennsylvania College, 24; Trinity, 20; Bates, 18; Maretta, 15; Middlebury, 13; Lehigh, 12; Chicago University, 12; Wittenberg, 9; Carthage, 9.

President Porter, of Yale, has been reprimanding the sophomores for their abusive treatment of freshmen. He declares that hereafter the faculty will do all in its power to protect students from indignities, and any student found guilty will be immediately expelled. The John A. Porter prize will be given to the best essay dealing with any one of the following subjects: 1. The Latin and Gothic, or Teutonic Spirit, as manifested in Literature, Art, and Politics. 2. The German. 3. The Classic Mythologies as Illustrative of National Character. 4. The Relation of the Renaissance to the Reformation. 5. Modernism and Rationalism, the conflicting Ideas of Modern Religious Thought and Worship. 6. Tendencies of Contemporaneous Literature and Art. 6. The English System of Civil Services Applicable to the United States. 7. Communalism in America. 8. Poetry as Affected by the Progress of Science. 9. Imaginary Commonwealths.

Harvard has this term 813 undergraduates, 230 of whom are freshmen. The tendency toward subtilizing lectures for recitations is becoming marked. There are thirteen unmatriculated students, and of those studying for post-graduate degrees, 25 are trying for A. M., 22 for Ph. D., and 4 for S. D. In the summer courses, 39 took Chemistry, Botany, and Geology; 38 (22 of whom were ladies) taking Botany; 15 Qualitative Analysis; 10 Geology; 5 Quantitative Analysis, and 4 General Chemistry. Candidates for admission will hereafter be examined, if they prefer, upon their general knowledge of required subjects, and in translation at sight. This plan will be tried for three years. The university now offers altogether 222,000 books. The following subjects have been given for junior themes: Should I spend the time now given every day to newspapers in reading standard authors? Has anything great been accomplished in a private model? The first was suggested from Emerson's Society and Solitude, and the second from Thoreau's work on Cape Cod.

The last hearing before the Boston School Board Committee on the admission of girls to the Latin School was held on Monday. The wife of Professor Pierce, of Harvard, made a long and clever argument in favor of this question. She thought the effect of co-education would be excellent, and that the fact of the employment of one hundred thousand female teachers in this country was a sufficient answer to the inquiry as to the necessity of giving girls a college education. President Warren, of Boston University, made an eloquent, judicious and forcible argument in support of girls' admission to the school. He took up the objections which have been made against it, and it must be confessed that, put into his many words, they looked flimsy, pettish and trifling. One of the reasons given why he should not grant the petition was, as Dr. Warren says, "because a gentleman [Professor Everett] to whom Boston gave free tuition in Greek for a number of years, and who has since thoroughly qualified himself to render an opinion, reports that Greek literature and Greek civilization are not fit to be taught to girls." Dr. Warren adds, in reference to this absurd statement: "This distinguished professor turned over to the tender mercies of Elizabeth Barrett Browning, Madame Dudez, Margaret Fuller and such like, or, if we prefer, to his old friend of Latin school days, Dr. H. C. Magill, who is abundantly able to debate this astonishing thesis with him in Greek, or, if that be not suitable, in Socrate."

The course of instruction in botany, at Cornell, has been considerably extended. As before, students in the general courses are required to take only one term of botany in the Spring term of sophomore year. For students in the natural history and special courses this is followed by work equivalent to five terms of four hours a week, and a sixth term in which botany is made optional with work in geology and zoology. There have been added to the old standard courses of lectures in vegetable physiology on systematic botany and horticulture a course of lectures and laboratory work on the ferns and a full course on fungi, each of one term of three hours a week, besides a full course on the mosses and algae, a term of two hours a week. Opportunities for additional laboratory work in most of these branches are also afforded the student. For the present term, instruction is being given in composition, the ferns and algae. Professor Prentiss is also giving a course of lectures on the laws governing plants under cultivation. The museum has received by gift during the year a collection of several hundred specimens of foreign woods in sections, from Professor Johnson, a collection of Brazilian woods from the Centennial Exhibition, and a large number of valuable ferns from South America. Small collections of fungi and lichens have been purchased. The museum has a nearly perfect local herbarium of mounted phaeophytous plants and ferns, besides numerous collections in the lower groups.

Professor Barbour, of Yale, told the Connecticut Teachers' Association, the other day, that not every dull recitation is to be had to the charge of the scholar. The teacher, the school committee, the town, or some one else away out in the domain of secondary causes, may be responsible for the failure. The teacher should be the head of the school in good spirits as well as good conduct. Let every teacher try to begin the school as you had just heard good news and took pleasure in imparting it, and keep this up all day. Those whom we teach have a right of an intelligent handling of the mind in inviting it to study. The powers of the mind in learning are, first, detecting differences; second, observing samenesses; and third, retaining what is seen. These, however, cannot be exercised all at once, and yet how often are the retentive powers put to work, while the observatory and discriminating powers are kept standing by idle. The heedless handling of the mind is not yet all over with. I maintain the right of this to stand to such a quality in the teacher's character as will command their respect. The one who is in charge of mind to lead it into knowledge will only fail it, at every turn, of the way, he cannot show himself the master. If a teacher fails in trying to explain a study to his pupil, he instructs that pupil no longer. If the narrow and selfish mind is discernible, the taught see it no sooner, yes, sooner than others. "Let no man despise thee," was Paul's advice to Timothy. The taught have a right to the absence of a suspicion of questionable proclivities in their teachers. How are the taught to be led into the doing, if the teacher himself balks at the alphabet of the lesson? There is a hidden truth which makes the taught perceive the worth of his teacher. Knowledge itself is an instrument merely, and ready to serve wrong as right. What is wanted is a truth that will operate upon habit. The school is emphatically a school of habits, of customs, of manners, of veracity, of consistency, in veracity. There is an ethical training in the very discipline of the school. Moral influences need not be frequent. Not the seeming but the being is the hidden force that compels the taught to the genuine worth of the master.

President Porter, of Yale, has been reprimanding the sophomores for their abusive treatment of freshmen. He declares that hereafter the faculty will do all in its power to protect students from indignities, and any student found guilty will be immediately expelled. The John A.
